The remote control allows you to:
• change programs
• turn volume or sensitivity up and down
• turn telecoil on and off
• turn auto telecoil on and off
• turn audio accessories on and off.

If you have two processors (bilateral), your remote control can communicate with both processors at once (depending on compatibility).

For more information on your processor, refer to the Cochlear™ Nucleus® CP910 and CP920 Sound Processor User Guide.

This guide is intended for cochlear implant recipients and their carers using the Cochlear™ Nucleus® CP910 or CP920 Sound Processors.

NOTE
Refer to the Warnings section for warnings and cautions relating to the use of the remote control and batteries.
CR210 Remote Control

- Program
- Telecoil button
- Next program button
- Previous program button
- Pin for attaching lanyard
- Volume or sensitivity
- Processor(s) paired
- On/Off switch
- Volume or sensitivity up button
- Volume or sensitivity down button

Other indicators on your remote control

- Telecoil on
- Low battery in remote control
- Accessory on
- Auto telecoil on
Symbols

**Note**
Important information or advice.

**Tip**
Time saving hint.

**Caution (no harm)**
Special care to be taken to ensure safety and effectiveness.
Could cause damage to equipment.

**Warning (harmful)**
Potential safety hazards and serious adverse reactions.
Could cause harm to person.

**NOTE**
Please refer to the booklet *Important Information: Warnings, Precautions and Electromagnetic Compatibility* for important information that applies to cochlear implant systems.

Battery
Battery

Change the battery whenever you see the low battery indicator, or if the display stays blank when you try to turn the remote control on. A battery should last up to three months (if the remote control is used about 15 times a day). See Warnings on page 30.

Change the battery

1. Unlock the battery cover by turning the screw anticlockwise with a small Phillips head (cross-head) screwdriver.

2. Slide off the battery cover and remove the battery.
Insert the new battery. Make sure the plus sign "+" is facing up. Take care not to damage the battery contacts.

Replace the battery cover, bottom edge first.

Lock the battery cover in place by turning the screw clockwise with a small Phillips head screwdriver until tight.

CAUTION
Use ONLY disposable CR2032 or 5004LC 3V standard lithium coin cell batteries in your remote control. NEVER use rechargeable coin cell batteries or other battery types.
Turn on

Turn on 12
Turn off 13
Pair 14
Out of range 15
Turn on

Slide the switch up to turn on.

When the switch is in the up position, the remote control will "go to sleep" when not in use. Press any button to "wake" it again.
Turn off

Slide the switch down to turn off.

TIP
Turn off your remote control to stop it "waking" when not in use, for example, when carried in your pocket.
Pairing allows the remote control to communicate with the processor. Your clinician may have already paired your remote control with your processor. If not, you will need to pair it the first time you use it.

If your remote control is not paired to any processor, it displays dashes (shown left) and “blinks” when you press buttons.

**Pair your processor and remote control**

1. Turn on your processor and remote control. They must both be “awake” and on at all times while pairing.

2. Place the coil on the back of your remote control.
Out of range

If your processor is out of range or experiencing interference, the remote control displays dashes (shown left).

The remote control will show pairing in progress.

The remote control then shows successful pairing of either left (L) or right (R) processor.

If you have two processors (bilateral), repeat steps 2-4 for your second processor.
Use

Change programs 18
Adjust volume or sensitivity 19
Use telecoil 20
Use audio accessories 21
Change programs

Your clinician may program your processor with up to four programs which you can choose with your remote control.

Control two processors
Your remote control adjusts both processors at the same time.

If your processors have different settings (perhaps because you adjusted one using the processor buttons), the remote control will display the program and volume/sensitivity settings for the left processor. If either processor has telecoil or an accessory turned on, the remote will display the relevant indicators.
Adjust volume or sensitivity

Usually, your clinician will set up your remote control to adjust the volume of the sound you hear. But your clinician can set it up to adjust sensitivity instead. Volume is the level of sound you hear. Sensitivity is the range of sounds you hear, for example, soft, background, close or far away. You can select from up to 10 volume levels or 21 sensitivity levels.

Press to turn up the volume or sensitivity
Press to turn down the volume or sensitivity

Display current settings
When you turn on the remote control, it always displays the current settings (e.g. volume), even if you have adjusted those settings using the processor buttons (or the remote assistant), while the remote control was off.

CAUTION
If you are adjusting volume settings often or if adjusting volume levels causes discomfort, consult your clinician.
Use telecoil

Listen to hearing loops and hear voices on the telephone with the telecoil. Your clinician can set up your processor with manual telecoil and also auto telecoil. Auto telecoil detects the telecoil signal automatically whenever you use a telecoil-compatible phone or are in range of a hearing loop.

You can not use telecoil while an audio accessory is connected to your processor.

**Turn telecoil on (if set up)**

Press the telecoil button once. The telecoil icon will appear.

**Turn telecoil to auto (if set up)**

Press the telecoil button twice. The telecoil icon and AUTO will appear.

**Turn telecoil off**

Press the telecoil button once. The telecoil icon will disappear.

**NOTE**

Certain electronic devices or machinery may automatically turn on auto telecoil (you may hear a buzzing noise). If this happens, move away from the device or machinery and wait a few seconds for auto telecoil to turn itself off, or turn it off manually.
Use audio accessories

When you connect an audio accessory to your processor, the accessory will be turned on automatically and your remote control will display an accessory icon. If telecoil was turned on, it will be turned off automatically.

While the audio accessory is connected, use your remote control to turn the accessory off and on again.

Turn the audio accessory off

Press the telecoil button once. The accessory icon will disappear.

Turn the audio accessory back on

Press the telecoil button once. The accessory icon will appear.
Care

Keep your remote control dry.

Clean your remote control by wiping the display and buttons with a soft dry cloth.

If your remote control gets wet

1. Dry the remote control with a soft dry cloth.
2. Remove the battery.
   See Change the battery on page 8.
Leave the remote control in a warm and well ventilated place (out of reach of children and out of direct sunlight) to dry for approximately 12 hours.

Do not use a drying kit or household appliance (e.g. hairdryer) to dry the remote control.

**NOTE**
Before replacing the battery, check for any remaining moisture. If moisture remains, repeat the earlier steps.

Insert a new battery. See *Change the battery* on page 8.

Warnings

- Do not use your remote control if it becomes unusually warm. Notify your clinician immediately.
- Small parts such as the coin battery could pose a choking hazard. Keep the battery cover locked at all times. Change battery out of reach of children. Do not allow small children to change the battery.
- No modification of this equipment is allowed.
- Use a soft dry cloth ONLY to clean the surface of your remote control.
- Do not use alcohol, household cleaners or abrasive materials to clean your remote control.
- Do not bend or compress the display on your remote control.
- Keep your remote control dry.
- Do not disassemble, modify, deform or immerse your remote control in water. If your remote control is not working, return it to your clinician. Warranty will be void if opened.
- Protect your remote control in environments where excessive moisture and dirt can damage it.
- Protect the display from objects that may scratch it.
- When the remote control is on, keep metal objects away from the display as they may cause interference.
- Do not place the remote control inside any part of your body (e.g. mouth).
- Keep the remote control out of reach of very young children.
Other information

Physical configuration

The remote control comprises:
• analogue and digital integrated circuits based on a micro-processor design, with bi-directional wireless communication capabilities
• buttons and a switch for control of processor features and its own system features
• a display for indicating system status and activity
• in-built coil sensor
• lanyard pin.

Materials

The remote control housing and buttons are made of polycarbonate and acrylonitrile butadiene styrene (ABS). The display is made of ABS.

Battery life

Battery life means the time a device will run before the disposable batteries must be replaced.

Wireless communication link

The remote control wireless communication link operates in the 2.4 GHz ISM band using GFSK (Gaussian frequency shift keying) on 5 channels. The link uses a proprietary bi-directional communication protocol and operates over a distance of up to 2 metres from the processor. When interference is present, the wireless communication link switches between the 5 channels to find a channel where the interference least affects the operation of the link. The remote control indicates via its display when the processor is not within operating distance, and when the link has been interrupted due to interference (see page 15).

Environmental protection

Help protect the environment by not disposing of your remote control or batteries with your unsorted household waste. Please recycle your remote control and batteries according to your local regulations.

Certification and applied standards

The CR210 Remote Control fulfils the essential requirements listed in Annex I of the EC directive 90/385/EEC on Active Implantable Medical Devices and with requirements of the EC directive 1999/5/EC on Radio and Terminal Telecommunication Equipment as per conformity assessment procedure Annex III.

The year in which authorisation to affix the CE mark was granted was 2013.

Equipment classification

Your remote control is an accessory to a medical device as described in the international standard IEC 60601-1:2005, Medical Electrical Equipment – Part 1: General Requirements for Basic Safety and Essential Performance.
This device complies with part 15 of the FCC Rules and with RSS-210 of Industry Canada. Operation is subject to the following two conditions:

- This device may not cause harmful interference.
- This device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications made to this equipment not expressly approved by Cochlear Limited may void the FCC authorisation to operate this equipment.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC ID: WTOR200BA
IC ID: 8039A-R200BA
Labelling symbols

The following symbols may appear on your processor or remote components and/or packaging:

- Consult instructions for use
- Manufacturer
- Authorised representative in the European Community
- Catalogue number
- Serial number
- Batch code

Coil guide. Used to position the coil against the remote control when pairing.
About

The Cochlear™ Nucleus® CR210 Remote Control is a hand-held device for controlling the commonly used functions of your Cochlear™ Nucleus® CP910 or CP920 (“CP900 series”) Sound Processor:

- change programs
- turn volume or sensitivity up and down
- turn telecoil on and off
- turn auto telecoil on and off
- turn audio accessories on and off.

If you have two processors (bilateral), your remote control can communicate with both processors at once (depending on compatibility).

For more information on your processor, refer to the Cochlear™ Nucleus® CP910 and CP920 Sound Processor User Guide.

This guide is intended for cochlear implant recipients and their carers using the Cochlear™ Nucleus® CP910 or CP920 Sound Processors.

NOTE
Refer to the Warnings section for warnings and cautions relating to the use of the remote control and batteries.
